

## STEPS TO REPRODUCE THE DATA:

- Download the dataset `clicks.dat` or get it from <https://www.kaggle.com/datasets/chadgostopp/recsys-challenge-2015>
- Preprocess it with `preprocess.py` to get two train/test splits: the `train_tr/train_valid` split can be used for hyperparameter optimization; final results are measured on the `train_full/test` split.
- Use either `run.py` with parameters stored in `param_samples` OR check out `run_rsc15.py` and run the appropriate code section.
